## DETAILED ACTION

### *Election/Restriction*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 7-11, drawn to a method for modifying a carbohydrate composing selecting at least one glycosidase from *Xanthomonas*, cleaving a selected glycosidic bond between constituent monosaccharides by glycosidase digestion, and forming a modified carbohydrate, classified in class 435, subclass 72.
  - II. Claims 12 and 13, drawn to a method of selectively cleaving glycosidic linkage in a carbohydrate comprising selecting a glycosidase from *Xanthomonas* having a substrate specificity for the glycosidic linkage, reacting the glycosidase with the carbohydrate substrate, and cleaving the carbohydrate substrate, classified in class 435, subclass 72.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). Each of the processes of Groups I and II are distinct both physically and functionally; require different process steps, reagents, and parameters; have different purposes; and produce different products.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christian L. Fronda whose telephone number is (703)305-1252. If attempts
